

Hey @dxid3r,

Que ondas, por ahí sigo participando en esto de los foros

Conociendo a más gente de HP ;)

Esas son algunas fotos del Evento en San Francisco, California.

Estaría bueno si te decides a participar :D

Saludos,

Feliz Navidad,

Fermin.

Aquí estamos en San Francisco, California con el grupo de brasileños y un mexicano.

Ahí están, de izq. a derecha Wander, Sabrina :smiley tongue: (creo que tú la conoces), Marcelo Pereira, (yo), Roseli, Renato, Jonatan,

En esta otra foto con los brasileños, de izq. a derecha, Wander, Sabrina, Jonatan, Marcelo Martins, Marcelo Pereira

## Making the impossible, possible; the story of the Golden Gate Bridge

Just 10,000 years ago, the sea level was over 300 ft (90m) lower than today. An ancient river cut a canyon here, forming the Golden Gate Strait. When a warmer climate ended the ice Age, the sea level rose and flooded the interior valley to form the San Francisco Bay, which connects to the Pacific Ocean through the Golden Gate Strait. Justly proud of its maritime and trade that falls on the state of California still flows through this gate. The importance that the Northern California coast! The natural setting of the Golden Gate Strait is exposed to strong tides, frequent winds, fog, and salt air, all of which posed challenges for building a bridge across it. In addition, the infamous San Andreas Fault, center of the 1906 San Francisco Earthquake, is only 3 miles (1) kilometers offshore.

Native people living along the bountiful San Francisco Bay saw their first recorded European exploration in 1775, when the Spanish ship San Carlos sailed through the Golden Gate. In 1776, Spain established a settlement named Yerba Buena, later in 1848, San Francisco (CA, France). In 1848, the population of the city was less than 500. In 1849, because of the Gold Rush, it was suddenly ten times greater.

In the early decades of the twentieth century, civil engineering made dramatic advances in the design and construction of long-span bridges. What was all impossible just a few years before, became a challenging possibility. Despite political opposition and a scarcity of funds due to the Great Depression that began in 1929, civic leaders, engineers, and construction workers, with imagination, courage, and determination came together to design and build what until then had been considered "the bridge that couldn't be built."

**Soon after 1900, the population of the San Francisco Bay Region had reached a million.** The major north-south highway in California, Highway 101, needed a bridge across the strait to form the statewide transportation route to support this population growth. However, a bridge across the Golden Gate Strait would require the longest span in the world.
