

Datstores on my host at the recovery site before the recovery plan has been tested or ran for the first time:

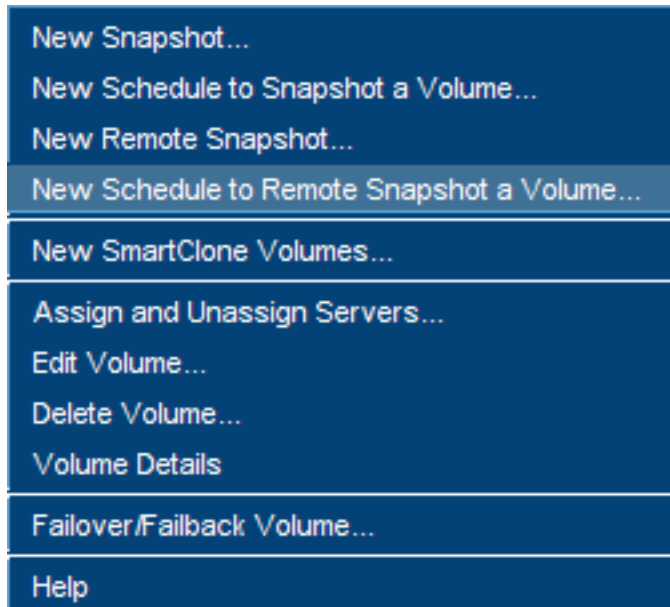

### Datstores

Identification	Status	Device
host2local	✓ Normal	Local Dell Disk (n...
iso (read only)	✓ Normal	192.168.10.201:/...
vms	✓ Normal	192.168.10.201:/...

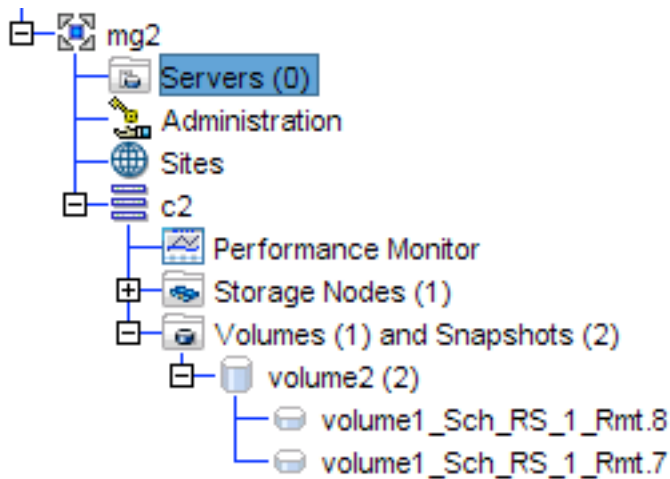

I added a host at the protected site, but none at the recovery site - see Server under each management group (mg1 and mg2).

Also note you need to use the Schedule to Remote Snapshot a Volume when you set up replication.

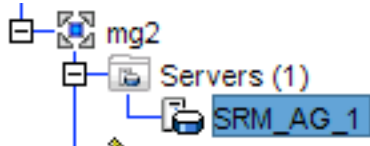

At this point, I have completed the setup in SRM including the creation of a recovery plan. As you can see in the screen shot below, there are still no servers assigned at the recovery site in the Lefthand Management Console.

During the prepare storage step, the host at the recovery site is added in the Lefthand Management Console.

 Refresh host storage s...	 host2.vmware...	 Completed
 Rescan all HBAs	 host2.vmware...	 Completed
 Prepare Storage for Te...	 vc2.vmware.lo...	25% 
 Run Test Mode Recove...	 vc2.vmware.lo...	2% 

**Name:**  SRM\_AG\_1

**Description:** Created by SRM

#### iSCSI Security

**Allow access via iSCSI:** Yes

**Enable load balancing:** No

#### Authentication

**CHAP not required:** Yes

**Initiator Node Name:** iqn.1998-01.com.vmware:host2-618a7e12

**CHAP required:** No

**CHAP Name:**

Datstores on my host at the recovery site while the recovery plan is being tested:
