**Subject:** Can we run Oracle 7.3.4 on HP-UX 11(64bit)?

**RDBMS Version:** 7.3.4

**Operating System and Version:** HP-UX 11 (64-bit)

**Error Number (if applicable):**

**Product (i.e. SQL\*Loader, Import, etc.):** Oracle Server -EE

**Product Version:** 7.3.4

Can we run Oracle 7.3.4 on HP-UX 11(64bit)?

Hi,

I would be upgrading my OS from HPUX 10 (32bit) to HPUX 11 (64bit). I wonder if this OS version would support my existing Oracle 7.3.4 database?

Thanks.

Best regards,

Sally Lau

Hi,

Sorry, 1 more question. After my OS upgrade, do I need to re-install Oracle 7.3.4 and apply patches, or can I just backup the whole Oracle home and restore?

Thanks.

Regards,

Sally Lau

Hi,

As far as HP is concerned all 32 bit applications are supported on 64 bit os. Only 64 bit Oracle release is on 8.0.5 and 8.1.5 not for 7.3.4. So have got to upgrade the os to 64 bit and check it out and try relinking the existing Oracle software and confirm there are no library changes in the os pertaining to the software.

Regards

Anand

HI ,  
I think there is a separate media for Oracle 7.3.4 on HP UX 11.0  
You may need to install the software as the libraries for HP 10 and HP 11 are different.

Hi all,  
  
My appreciation for the help. Just 2 days ago, I've successfully installed Oracle7.3.4 on HPUX 11(64b). On this machine, I also have Oracle8.1.5 installed. I am running into another problem now i.e. migration.  
  
I've posted another message in this forum, titled: "ORA-00400 during Migration". Maybe someone knows the solution ... ???!  
  
Thanks and best regards,  
Sally Lau

Sorry, the forum subject is "ORA-00404 during Migration".  
  
Thks.

**Subject:** Re : Can we run Oracle 7.3.4 on HP-UX 11(64bit)?

Hi,  
  
Check the logfiles for more information on what the problem was during the migration:  
  
In this instance logfiles contained the following errors:  
  
parameter file exceeds 8192 bytes  
  
Oracle was having trouble reading the init file as it exceeded the 8K limit. By making the filesize lower than 8K the migration completed successfully.  
  
Solution :

ODMA allows the user to continue the migration process if errors are present. When ODMA attempts to convert the database it will fail with ORA-404 Convert file not found: '%s'" because the mig utility never created the convert file.

Regards

Anand
