You are installing Oracle 8i on a HP-UX 11.0 machine and getting errors on every make action.

Looking at make logfile or relinking on the command line issue the same errors. These are:

```
--  
chmod 755 /local/oracle/oracle8/8.1.7/bin

```

Solution Description

This is due to the fact that you are installing Oracle 8i 8.1.6/8.1.7 64 bits
on a HP-UX 11.0 32 bits system.

Solution:

The solution is to either install 32 bit Oracle or upgrade HP-UX 11 to 64 bit.

Explanation:

To confirm that, do the following:

```
--  

$ getconf KERNEL_BITS # -- check whether OS is 32/64 bits
```

```
32
# -- this is 32 bit HP-UX 11

$ cd $ORACLE_HOME/bin
$ file oracle

# if this is the answer, you have 32-bit Oracle
oracle: PA-RISC1.1 shared executable dynamically linked -not stripped
# if this is the answer, you have 64 bit Oracle
oracle: ELF-64 executable object file - PA-RISC 2.0 (LP64)
```
