

TECH NOTE

Switch Types and Product Names

Lists switch type codes with corresponding switches

The following table lists Brocade switch type codes as they appear in Command-Line Interface (CLI) command output and their corresponding Brocade model names. The switch type is a field (switchType) displayed in the output of the **switchShow** command. When you are gathering information for your switch support provider, you may be asked to provide the switch name (model). If you do not know the model, you can use this table to map the switch type to the model.

NOTE: Switch type output displays these values with 1.x for the Brocade 1000 family, 2.x for Brocade 2800, and so on. The "x" value refers to motherboard revision level.
