

Vlans *Floor1* and *VoIP* are in trunk, *Dept2* no
(The firewall has to manage access policies)

On 8212 master, I think there should be these two static routes
For incoming traffic : 10.4.11.0/24 by 192.168.132.30 (firewall)
For outgoing traffic : 10.4.X/16 by 192.168.128.10 (cisco2 router)
(10.4.x because there are various sites in addition to Main Repository)
