Subject: Can't start BIND (VMS:V7.3-2/TCP:V5.4-eco6)

Dec 10, 2008 13:28:58 GMT

I've configured a simple set of files for a domain (forward and reverse databases) and ran the configurations script supplied to create the BIND config file. When I start BIND, OPCOM reports:

images installed...

INTERNet ACP Error during process startup, Nolisten Service Disabled - BIND server  
INTERNet ACP AUXS error during process exit Status = %CLI-E-IMAGEFN

I cannot find any appropriate log files to research this problem. Any hints?

Around here,  
TCPIP SHOW SERVICE /FULL BIND  
suggests looking at  
SYS\$SPECIFIC:[TCPIP\$BIND]TCPIP\$BIND\_RUN.LOG  
which seems to:  
run 'f\$edit("sys\$system:tcpip\$bind\_server.exe", "upcase")'

I have one of those:

Directory SYS\$COMMON:[SYSEXE]

TCPIP\$BIND\_SERVER.EXE;1  
4300 2-OCT-2007 19:13:33.28 (RWED,RWED,RE,RE)

alp \$ tcpip show version

HP TCP/IP Services for OpenVMS Alpha Version V5.4 - ECO 7  
on a COMPAQ Professional Workstation XP1000 running OpenVMS V7.3-2

> SYS\$SPECIFIC:[TCPIP\$BIND]TCPIP\$BIND\_RUN.LOG

Oops/Duh. I meant:

TCPIP\$SYSTEM:TCPIP\$BIND\_RUN.COM

I get no run .LOG. Does your log file indicate what file is running to create this? where is the 'run' command?

Nevermind.... I figured it out:

\$ PIPE TCPIP ENABLE SERVICE BIND ; TCPIP SHOW SERVICE BIND/FULL

Showed UCX definitions. I would have thought that running TCPIP\$CONFIG would have corrected this but thei is TCPIP Services, I should know better.

All's well that ends well...

> [...] where is the 'run' command?

You were supposed to read the output from TCPIP SHOW SERVICE /FULL BIND more carefully than I did. (At least more carefully than I did when I was doing that copy+paste operation.)

Brian,

from your Forum Profile:

<quote>  
I have assigned points to 0 of 35 responses to my questions.  
</quote>  
... dating all the way back to 2004.

Maybe you can find some time to do some assigning?

<http://forums1.itrc.hp.com/service/forums/helptips.do?#33>

Mind, I do NOT say you necessarily need to give lots of points. It is fully up to YOU to decide how many. If you consider an answer is not deserving any points, you can also assign 0 (= zero ) points, and then that answer will no longer be counted as unassigned. Consider, that every poster took at least the trouble of posting for you!

To easily find your streams with unassigned points, click your own name somewhere.

This will bring up your profile.

Near the bottom of that page, under the caption "My Question(s)" you will find "questions or topics with unassigned points " Clicking that will give all, and only, your questions that still have unassigned postings.

Thanks on behalf of your Forum colleagues.

PS. nothing personal in this. I try to post it to everyone with this kind of assignment ratio in this forum. If you have received a posting like this before please do not take offence none is intended!

PPS. Zero points for THIS entry, please.

Proost.

Have one on me.

jpe

Why can't you reply to individual posts?

Anyway, Steven, the problem was that the BIND was immediately disabled after starting it. Therefore, there is little information available. When I used the PIPE it started the service and nearly immediately queried it before it was disabled. That's how I found the problem. It must have been enabled at some time in the past and the BIND definition was still using the UCX\$BIND directory and image.

```

"; Tokens[C] = txt.substring(l, intNewLine) ; if (l ==0) // ie. The post start with a URL :- JAGaf82656 { pretextToken = ""; } txt =
txt.substring(intNewLine); l = intNewLine; intNewLine = txt.toUpperCase().indexOf(""); txt= txt.substring(0,intNewLine) + "" +
txt.substring(intNewLine+4); C = C+1; } //test.innerHTML = txtReturn; return txtReturn ; } function restoreLink(cellId) { var tdl =
document.getElementById(cellId); var txt ; txt = pretextToken + tdl.innerHTML; //Add the pretextToken :- JAGaf82656 var Z=0; var
txtHolder = ""; for (A=0 ; A < C ; A++) { txtHolder = "" ; Z= txt.indexOf(txtHolder); txt = txt.substring(0,Z) + Tokens[A] +
txt.substring(Z+txtHolder.length); txtHolder = "" ; Z= txt.indexOf(txtHolder); txt = txt.substring(0,Z) + "" + txt.substring(Z+txtHolder.length);
tdl.innerHTML = txt; } function formatTableCell(cellId) { var tdl = document.getElementById(cellId); if (tdl.offsetWidth <= cellWidth ) {
