

HPSIM upgrade 6.0 recovers my Insight DB version 5.3 DB

I had a HP Insight System Insight Manager 5.3 installed in April 2010, fully configured with about 2500 devices with some organized by Location and Rack and a lot of “Discovery filters” and “Automatic Event Handling”.

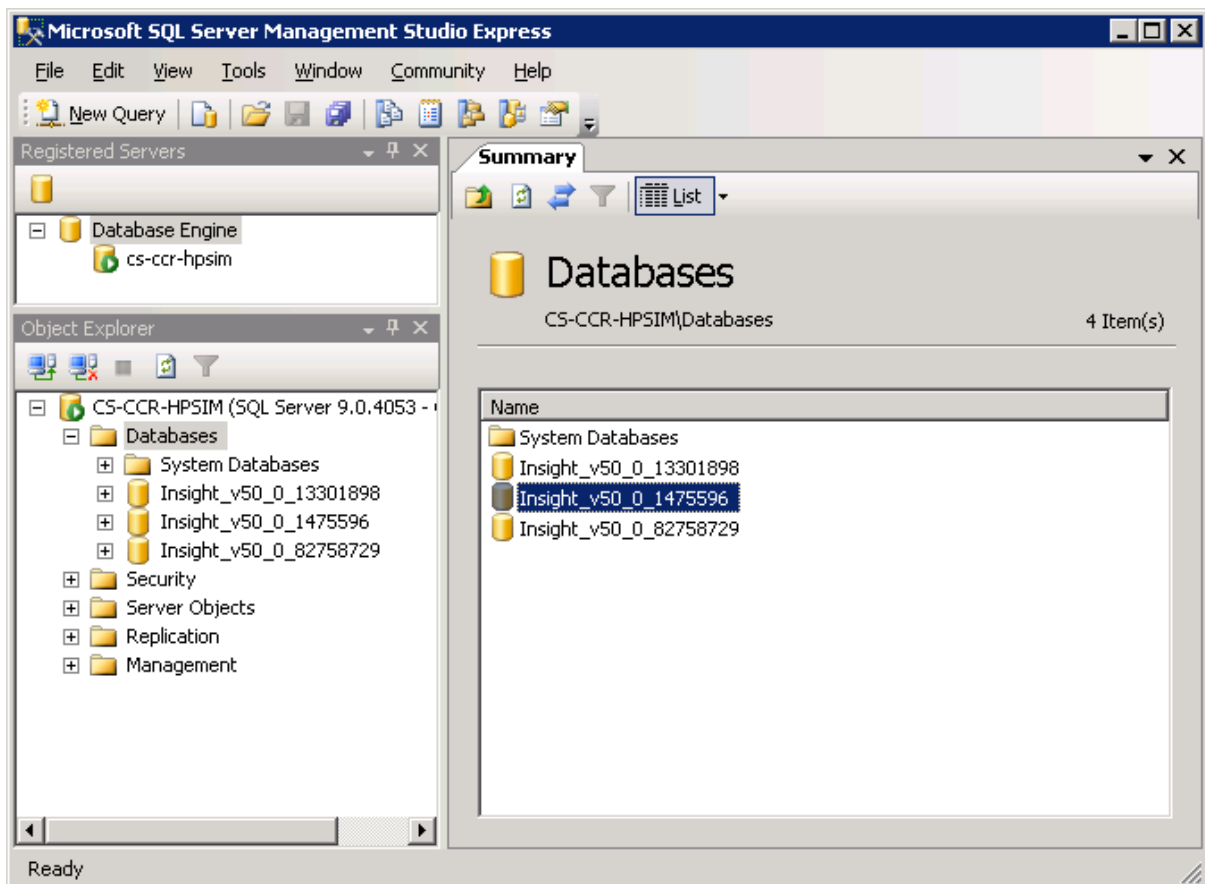

I followed the procedure described into the Chapter 6 – “Upgrading Systems Insight Manager” from the HP Systems Insight Manager 6.0- Installation and Configuration Guide for Microsoft Windows.

But after installation, all data where lost and the wizard ask me about the configuration!

Is there any way to recover such information’s, specially knowing that the old database seems to be still coherent, but not used into the directory:

C:\Program Files\Microsoft SQL Server\MSSQL.1\MSSQL\Data

Any known method to change the HPSIM config for that it uses the old one instead of a new empty one?
